

Log Book

20/07:

I have coded a K-Fold Validation code to take all the models with 2 conv2D & 1 Dense layers with $f1 > 0.98$ and do cross-validation training without any special counter-overfitting method for DL models. I will run it tomorrow. The code works well, I tried with epochs = 1 and an excel tab was saved and readable

21/07:
