

## Workstream:

- **Work on 36x36 images** (try DL models that have been trained earlier on 24x24)
- **Compute flops during all the future trainings**
- **Use anti-overfitting methods**: regularization, dropout, early stopping, etc. for top 10 (or less) trained models on 36x36
- Check diverse digital images features to use with ensemble learning
- Have a look at OOP & Web Scrapping
